Abstract (en)
A gas-liquid dye-spraying apparatus (20) including at least one set of siphon-type nozzles (22,23) disposed on each of the upper and lower sides of the spraying passage (200) in the dyeing machine. The nozzles (22,23) eject strong wind to stably siphon the dye. The dye is more evenly atomized and distributed so as to achieve better evenness of dyeing. The wind pressure and the mixing ratio of the air to the dye can be independently and mobilely regulated. Therefore, the cloth (70) can be better guided and circulated. Also, the consumption of the dye is reduced. <IMAGE>
