Abstract (en)

[origin: EP1418267A1] A drive-capable support or traction member comprises layer(s) of strands of synthetic fiber material; an outer casing that encases the strands; and lubricant mixed with an impregnant of the strands, a lubricant mixed with a material of the outer casing, a lubricant applied to outer surface(s) of the strands, a lubricant mixed with a material of an intermediate casing, and/or a lubricant applied to an intermediate casing. An Independent claim is also included for a method of manufacturing the inventive drive-capable support or traction member comprising mixing a lubricant with an impregnant of the strands, mixing a lubricant with a material of the outer casing, applying a lubricant to at least one outer surface of the strands, mixing a lubricant with a material of an intermediate casing, and/or applying a lubricant to an intermediate layer.
