Abstract (en)

[origin: EP1418279A2] Nubbed web (4) for sealing buildings has a sliding surface arranged on its rear side (8). The sliding surface has channels forming rear drainage (12) and covering only a small proportion of the rear side so that the sliding properties of the rear side are preserved and pressure forces are distributed over large areas of the rear side. An Independent claim is also included for a seal for buildings, especially in the region of foundation brickwork, comprising a nubbed web having a sliding surface arranged on its rear side. Preferred Features: The channels of the drainage are formed as grooves in the rear side.
