Abstract (en)
A foldable ballot box formed by a lower base and an upper frame which have between them, by means of swivel-mounting, respective longitudinal walls that can be folded in the center towards the inside, and said upper frame housing, by means of swivel-mounting, respective transversal side hatches which shift from a position that is adjacent to the lower surface of the frame to a position that is vertically extended when said longitudinal walls are completely unfolded, thus preventing their folding; thus creating the inner operative area of the ballot box, which is closed by means of a cover that detachably fits on said frame and which has a passing slit in its surface that is suitable for introducing voting ballots. <IMAGE>
