Abstract (en)
[origin: WO03018411A1] A container, comprising a hollow body (2) extended along a longitudinal axis (5), a sealing means (4) and an opening means (3). The hollow body (2) defines, together with the sealing means (4), a compartment (11) which can be made to communicate with the surroundings by opening of said opening means (3). The container is characterised in that the hollow body (2) is essentially cylindrical or in the form of a truncated cone and has a closed first end (6) and an opposite open second end (7). The opening means (3) is arranged in or in connection with the first end (6) of the hollow body (2), and the sealing means (4) covers the second end (7) of the hollow body (2) and thus forms a bottom (12) of the container. The present invention also relates to a method for producing such a container filled with contents.
