Abstract (en)

[origin: WO03104589A1] The invention relates to a cover device (16, 28, 43) comprising a cover panel (2), which can be displaced between a first position that covers an actuating organ (5) and a second position, which releases the actuating organ (5, 34). Elements (19) for securing the cover panel (2, 42) in the first position are provided. Said elements (19) are located in a lateral wall of the cover panel (2, 42) or are invisibly situated behind the cover panel (2, 42) and are controlled electronically. Preferably the key (16, 28) comprises a plurality of projecting pins (17, 31) for displacing the tumblers (19).
