Abstract (en)

[origin: WO03018940A1] The invention relates to a power lock holder for a door lock, especially a motor vehicle door lock. In its basic design, the lock holder is equipped with a locking bolt (1) mounted on an adjustable actuation rocker (2), and a drive device (5, 8, 9, 10) for the actuation rocker (2). The drive device (5, 8, 9, 10) displaces the actuation rocker (2) carrying the locking bolt (1) and a rotary latch comprising the same, and thus a door associated therewith, from a pre-locking position to a final locking position, namely by means of a motor. According to the invention, an additional catch lever (11) secures the actuation rocker (2), when the door is manually displaced from the pre-locking position to the final locking position, in said position.
