Abstract (en)
[origin: WO03019432A2] The invention concerns a project management tool comprising a plurality of terminals communicating with a central server, at least one of the terminals including: means (11) for defining project models and for inserting them in a model library (6a), each project model including a list of step models, one step representing a set of tasks contributing to the achievement of the project; means (15) for defining a scenario defining links between a source model and a target model, each link being associated with a condition concerning the properties of the source model of the link; means (21) for generating projects from project models and steps from step models; and means (30) for updating and display the state of the project steps, and for generating a new step from the target model of a scenario link, when the condition associated with the link is fulfilled.
