Abstract (en)

The invention relates to a method for manufacturing a sweeping apparatus provided with brush elements. Brush elements and a disc provided with receiving elements are herein provided. A brush element is placed in a receiving element and is herein supported in the longitudinal direction. At least two brush elements are fixed substantially in one work operation. The invention is characterized by arranging the brush element in the receiving element in a direction substantially transversely of the longitudinal direction of the brush element, and fixing by engaging the brush elements in a transverse direction. The receiving elements are open in the cross-section. <IMAGE>
