Abstract (en)
[origin: EP1419756A1] Operating table comprises a table top mounted on a support column. The table top can be displaced from a central position perpendicular to the table longitudinal axis and is held on the support column so that it pivots about a pivot axis parallel to the table longitudinal axis. During the pivoting movement (30) the table top is automatically displaced in the direction of its central position perpendicular to the table longitudinal axis. Preferred Features: If a specified limit angle is exceeded during the pivoting movement, the table top is automatically displaced in the direction of its central position perpendicular to the table longitudinal axis.
