Abstract (en)

[origin: EP1419855A1] The user of the fixing equipment (100) introduces a case-loader containing nails into a funnel (101). The nails slide in the supply tube (10) to the front of a plunger for indirect firing, in a guide buffer (102). The user then has to only activate a trigger (103) to drive the nails into the support by the plunger. The transparent supply tube has a non-circular interior section (21) and is arranged so that the contact between the lateral wall of the nail circular head (1) and the tube interior wall is impossible over certain portions (22). The interior wall is longitudinally grooved (23) in the same material as the tube.
