Abstract (en)

A clothes line device comprising a casing (2) having a support member (3) by which the clothes line device can be attached to a supporting surface, said casing including a clothes line support comprising at least two independently rotatable members (7a,8a,7b,8b), each member supporting a respective clothes line (5) which can be extended from the clothes line device from one or more apertures (6) in the casing (2), said rotatable members being operable by a return mechanism by which the clothes lines may be caused to be retracted back into the casing (2) when desired.
