Abstract (en)
[origin: US2004093999A1] A crimping tool includes a crimping drum that is rotatably supported within a housing for displacement between a plurality of crimping positions, thereby to position a selected one of a plurality of crimping dies opposite a window through which the bare end of an insulated conductor is introduced, characterized by the provision of a first drum locking arrangement that connects the drum to the housing via a die selecting wheel that is non-rotatably connected with the drum. A second retaining arrangement is operable to lock the other end of the crimping drum to the housing.
