Abstract (en)

[origin: DE10237463A1] The system has a main brake cylinder, at least two brake circuits hydraulically connected to the main cylinder, magnetic valves (58,60,...) individually associated with the brake circuits and an arrangement for feeding voltage pulses to the magnetic valves, whereby the hydraulic pressure in the brake circuits can be modulated. Drive signals can be fed to the magnetic valves per individual wheel or specific brake circuit. AN Independent claim is also included for the following: (a) a method of influencing a hydraulic braking system.
