Abstract (en)

[origin: WO03020867A1] A perfumed speckle composition which comprises at least 1 wt% perfume, preferably at least 1.5 wt% and is preferably made by a process comprising the steps of (i) mixing an aqueous perfume emulsion and a colourant with an inorganic granular carrier material and (ii) layering the resultant material with a finely divided porous particulate material. The invention also relates to detergent compositions comprising a minor proportion of a coloured speckle composition wherein at least 10 wt%, preferably at least 20 wt%, more preferably at least 30 wt%, of the total amount of perfume in the detergent composition is located in the speckles.
