Abstract (en)

[origin: WO03016802A1] A refrigerating appliance has a heat-insulating housing and at least one storage compartment, which can be closed by a door and in which at least one stored material support is mounted in a manner that enables it to be pulled out with the aid of telescopic pull-out devices. Each telescopic pull-out device has a fixed rail part (15) situated on a sidewall of the storage compartment and has a loose rail part (16) assigned to the storage good support. At least one end piece (20) of the fixed rail part (15) is held inside a recess, which is open toward the door and located on the inside wall of the storage compartment.
