Abstract (en)

[origin: WO03028282A2] A method for the transmission of one or several data sets (A) to at least one plurality of receivers (T1...TN) combined to form at least one group (XY), also involving a common transmission to a group address interposed therebetween, wherein the data set (1) can be sent as a group message directly to all receivers (T1...TN) combined to form said group (XY). According to the invention, a common profile of a quality standard of transmission is stored by a central point (VE) for all receivers (T1...TN) of said group (XY).
