Abstract (en)
[origin: EP1422343A2] The press parts (8) on the undersides (7) of the levers (3) can be moved along a lift axis (10) in order to alter their height relative to the lever. The press parts can also be rotated about this lift axis. The mounting device (1) has two opposing levers which can be pivoted about an axis (4) extending at right angles to the rail length direction using an adjustment cylinder (5). Each cylinder has a press part on its underside for contacting the clamp (2).
