Abstract (en)

[origin: EP1422355A1] The shuttering plate (10) is made from a concrete which is highly fluid to compact automatically when it is poured. Recesses (11) are provided for inserting reinforcement irons and in the recess area the concrete residual thickness around the reinforcement insert is preferably about 2mm. Independent claim describes method for manufacturing several shuttering plates by filling out the cavities between the pairs of plates with self-compacting concrete in one work step.
