Abstract (en)
[origin: WO03021172A1] A device for unloading of frozen blocks (7) from vertical freezers, particularly freezers for freezing of fish and other seafood products, comprising a number of vertically arranged freezing plates (5) defining freezing chambers (4) in the space between the freezing plates, is described. The device comprises a pushing arm (19) arranged across the longitudinal axis of the freezer, where the arm is movable along the freezer. The pushing arm has at least one pusher (21) arranged to push the blocks (7) out across the longitudinal axis of the freezer.
