Abstract (en)
[origin: WO03012432A1] The present invention provides a method to treat anemic and non-anemic subjects having malignancies with a combination of EPO and an anti-Tumor Necrosis Factor compound such that there is a reduced need for transfusion and a greater hemoglobin level. The present invention provides a method to treat anemic and non-anemic subjects having malignancies with a combination of EPO and an anti-Tumor Necrosis Factor compound such that anemia may be successfully prevented or treated during the course of a chemotherapeutic regimen. The present invention provides a method to treat anemic and non-anemic subjects having malignancies with a combination of EPO and an anti-Tumor Necrosis Factor compound such that the patients show greater quality of life, show relief from fatigue symptoms, and show improvement in physical performance and well being.
