Abstract (en)

[origin: EP1289200A1] The method involves a station (S1) with the capability of providing special functionality (F) to other network stations and/or of relaying to a station with special functionality signaling this capability to the other network stations (S2,S3) in the network. The signaling (a) is carried out over a messaging and/or communications channel. AN Independent claim is also included for the following: an ad-hoc network station.
