Abstract (en)

[origin: WO03013106A2] A personal video service manager can store one or more personal video assets on a server. A personal video asset can comprise a recording of a broadcast stream of a broadcast asset or an asset that has been pre-authored in a personal video asset format. Upon receiving a request from a subscriber to receive the personal video asset, the personal video service manager can facilitate a connection between the server and the subscriber for distributing the personal video asset from the server to the subscriber.
