Abstract (en)
[origin: EP1424057A1] Child's pacifier, comprising a first part (12) which, in use, remains outside the mouth, and a second part (14) which is inserted inside the mouth. The second part (14) comprises a terminal portion (32), which is positioned in a palatine arch (22) of an oral cavity (20), and a connection portion (30). The terminal portion (32) has a flattened shape and comprises a convex upper face (34). The thickness of the terminal portion (32) gradually thins from a maximum value in a position adjacent to the connection portion (30) to a minimum value as it goes towards the respective lateral edges (42, 44) and towards its front edge (45), until it is substantially annulled. The connection portion (30) has a flattened shape with a thickness of less than 3 mm. <IMAGE>
