Abstract (en)

An adjustment device, particularly for adjusting the length of a skate, which comprises a frame (2) provided with first connection elements (5) to two or more wheels, a shell (6) associated with the frame (2) in order to accommodate at least the heel of the user, and a toe unit (14) slidingly associated with the shell (6) and/or frame (2) in order to accommodate the tip of the user's foot. The device comprises a slider (35) that can be actuated by the user, and is substantially transversely associated to the toe unit in contrast with an elastic element (40) and interact selectively with the frame and/or shell (2). <IMAGE>
