Abstract (en)

[origin: EP1424211A1] Device (1) for producing a bound printed product (2) comprises a conveying device (3) with a bearing surface (4) formed from individual elements and angled toward the side and carriers (5) for pulsed transfer of print products to an intermediate conveyor located upstream of a binding path. The transfer region of the conveying device and the intermediate conveyor is formed by a pulsed-driven lateral support disk (8) having on its periphery at least one recess (14) assigned to the carriers. Preferred Features: The support disk has a flat surface arranged to the side of the bearing surface of the conveying device.
