Abstract (en)  
The invention is concerned with a vehicle support apparatus which comprises at least four supporting means 1 the supporting means 1 being spaced apart so as to accommodate the wheelbase of a motor vehicle and having dimensions suitable to support the vehicle at a convenient working height. The support apparatus facilitates the convenient loading and unloading of a vehicle thereon by means of a mobile lifting device. The support apparatus is particularly suitable for use in conjunction with lifting means in order to provide a vehicle lift which allows for ready access to all parts of the vehicle. Consequently, the vehicle support apparatus and vehicle lift are especially useful in facilitating the efficient depollution and/or dismantling of vehicles. <IMAGE>
