Abstract (en)  
[origin: EP1424454A1] By establishing roof constructions (24) with interlocking tiles, special binders (2) are used. However, the shape of the interlocking tiles varies as well as variations in construction of the roof in which the binders are used occurs, putting great demands on suppliers of the interlocking tiles with regard to supply correct binders for the roof constructions concerned. <??>By the invention is provided a two-part binder for interlocking tiles, comprising a gutter member (4) and a lath member (18), as the distance between the binder dog (6) and locking hook (20) is adjustable by interacting retention means in the shape of a toothing (16) on the gutter member length and a hole (14) disposed symmetrically about the centre axis (36) of the length. <IMAGE>
