Abstract (en)

[origin: WO03025324A1] The invention concerns a device for mounting assistance designed for a window frame, comprising a fixing element (1203) located at the window frame (1204) and a spring element (1202). Said device is configured so that the spring element (1202) is pressed against the fixing element (1203) on one side, and against the structural opening (1205) on the other side so as to be elastically prestressed, when the window frame is inserted in the structural opening (1205).
