Abstract (en)

[origin: WO03025959A1] The invention relates to a keypad for a communication terminal, comprising a lower and upper shell (5). An elastic foil (4) is arranged between the upper side of the upper shell and the lower side of the keys (1, 2, 3) of the keypad. Said foil presents corrugations (11), which substantially delimit the surfaces corresponding to each key (1, 2, 3) and serve as a return device.
