Abstract (en)

[origin: EP1426317A1] The friction lining (2) for a distribution roller for the driving of a spool on a textile machine is in the form of a belt with two open ends (20,21) which are interconnected by a connecting device (3) which is simultaneously constructed as a fastening device. The friction lining is fastened to the roller at a distance from its two ends by means of at least one fastening device (81). The connecting device has two connecting elements (30,31) which by their associated ends are connecting to the friction lining.
