Abstract (en)

[origin: EP1426321A1] The mobile crane (10) has a long main boom (12), which is divided into two parts (14, 16). These two parts are pivoted to each other at a pivot point (18) so that they can bend relative to each other for raising the boom. Thus they can be brought to a straightened-out or almost straightened-out position for the final assembly position.
