Abstract (en)

[origin: EP1426327A2] The procedure for the dispensing of a drinking fluid, made available in a supply dispenser (2) and cooled before dispensing, entails providing the drinking fluid (12) vacuum packed in an intermediate container which is then connected by the bottom end via an outlet to a pipe (6,7) or hose leading to the dispensing point. The pipe through which the fluid flows is cooled before the dispensing. For transporting the fluid is contained in a vacuum packed film bag (11) within a cardboard vacuum packed box (10). An Independent claim is included for a unit for the dispensing of a drinking fluid which is cooled before dispensing.
