Abstract (en)

[origin: EP1426692A2] The device has a body and a door with a closed door frame, a viewing panel, a metal choke profile with a base body and a frame on the base body's inner side wall to cover the base body opening facing the body up to a first gap between the free edge of the frame and the base body's outer lateral edge with the door closed. The viewing panel covers the frame so that the edge of the panel and the outer side wall of the base body form a second gap. The device has a body and a door with a closed door frame, a viewing panel, a metal choke profile (6) with a peripheral, essentially U-profile base body (6.1) and a frame arranged on the inner side wall of the base body to cover the base body opening facing the body up to a first gap between the free edge of the frame and the outer lateral edge of the base body with the door closed. The viewing panel (12) covers the frame (6.2) so that the edge of the panel and the outer side wall (6.1.1) of the base body form a second gap (14).
