Abstract (en)

A device (1) for the controlled supply of products (3) comprises control means which are able and adapted to receive payment means and to record settlement of an amount due in order to then release at least one product for supply to a user. The payment means comprise an electronically accessible information carrier (5) which is adapted and able to provide access to a balance of the user. Such an information carrier is provided with programmable memory space for receiving therein at least one indicator of the age of a user. The control means are moreover able and adapted to read said memory space and to release the at least one product for supply only when a prescribed age has been established. Also provided is a programming device for placing such an age indicator in the memory space of such a payment means. <IMAGE>
