Abstract (en)  
[origin: DE10155292A1] Each multi-segmented filter (49) has at least two different types of filter segments (6,7). The machine is divided up into a number of independent operating units most of which are arranged in a row so that at least one part of the conveyor elements of two adjacent operating units work together. the conveyor elements are in the form of collector-drums and or transfer drums.
