Abstract (en)
[origin: WO03024274A1] The invention relates to a drawer comprising two lateral sections (2) and a front panel (4) mounted on the lateral sections (2), said front panel having two front fixing elements (6) for receiving respective section attachments (5) on its front face and having rear fixing elements (7) for connecting the section attachments (5) to a rear wall (3). To provide advantageous construction conditions, the one-piece front and rear fixing elements (6, 7) constitute insertion recesses (8) that are open at the front for receiving the section attachments (5). The height (H) of at least the insertion recesses (8) in the front fixing elements (6) is greater than the height (h) of the section attachment and in the vicinity of the recess wall (9), on the side of the attachment, said recesses are provided with a spring-loaded tongue (10), which projects into the recess opening to produce a stop surface (11) for the respective section attachment (5).
