Abstract (en)

[origin: WO03018339A2] The invention concerns a device for closing or opening a loading side of a vehicle using a series of rigid panels which can be folded back in accordion. The panels are built in the upper side sill (4) and in the lower side sill (3) in closure configuration and means are provided to cause at will the panels to project outside the side sills so that they can be folded back. The invention is applicable to cargo transport by road or by rail.
