Abstract (en)
[origin: CA2460715A1] The invention relates to a dispensing closure (10) for a beverage container, comprising a closure body (100), whose passage opening (126) is connected to the exit opening of the container, a closure element (200) and a dispensing tube (300). A compression organ (280) is located on the closure element (200) and a counter support (180) is arranged on the closure body (100). A coverin g (10) of the closure body (100) has a stepped support (124) comprising an exi t opening (126) for the dispensing tube (300). The dispensing tube (300) is adapted to the support (124). An annular collar of the dispensing tube (300) borders an annular stop surface (130) of the tube holder (122, 124) and is enlarged by an annular protuberance (332), which engages in an annular groov e (132) of the second step (134). The dispensing tube (300) covers the annular collar (122). The cap surface (210) can be placed over the tube holder (122, 124) when the closure element is closed, in such a way that the dispensing tube (300) is bent over using the compression organ (280).
