Abstract (en)  
[origin: WO03023301A1] The invention relates to a refrigerating appliance comprising a heat-insulating housing and an inner chamber which is cooled by means of the circulation of cooling air. A hollow body (2) extends in the inner chamber, defining a flow channel (5) for the cooling air. Carriers (16) for goods to be cooled are arranged in the inner chamber and are supported on the hollow body (2).
