Abstract (en)  
[origin: EP1428451A1] The bracelet has modular sets (1, 1, 1) with two hinged parts (2-6) around a transverse median axis (7) and having units (3b, 4b, 5b) to receive two transverse stems of articulation. The stems laterally emerge from returning and two projecting portions of the modular units, so that when the parts receive two stems, other stems are locked angularly around the axis and are between two side faces of the returning portion.
