Abstract (en)

[origin: EP1251082A2] The container has a box-shaped body (2) and sliding esp. pivoted cover (3). The cover has an opening and a secondary cover (7) mounted on/in it. The edge of the secondary cover located at the front in closing direction (10), forms the front edge (5) of the pivoted cover when this is closed. The width of the aperture is dimensioned, so that a human body cannot be jammed in the remaining width between the side edge of the opening and the top edge the container body.

[origin: EP1251082A2] The container has a box-shaped body (2) and sliding esp. pivoted cover (3). The cover has an opening and a secondary cover (7) mounted on/in it. The edge of the secondary cover located at the front in closing direction (10), forms the front edge (5) of the pivoted cover when this is closed. The width of the aperture is dimensioned, so that a human body cannot be jammed in the remaining width between the side edge of the opening and the top edge the container body.
