Abstract (en)

[origin: EP1428951A2] Device (10) for automatic impregnation of an absorbent body (32) at least partly arranged in a bore hole formed in an absorbent solid body, preferably in masonry, concrete or wood, with an especially hardenable liquid, especially a capillary water barrier, comprises a reservoir (12) for the liquid which is connected to an outlet device (14). An arm (22) introducing the liquid into the bore hole contains an impregnation trough (26) which is automatically filled with the liquid via the outlet device. An Independent claim is also included for a process for automatic impregnation of an absorbent body arranged in a bore hole formed in an absorbent solid body with a liquid, especially a capillary water barrier.
