Abstract (en)
[origin: EP1428972A2] The arrangement has a rod (11) held so as to be axially movable by a drive device positioned on the floor of a building and with an end part (140) and a supporting part (160) enclosing an elastic element (15) and movable relative to each other under force action. The supporting part can be pressed against the ceiling of the building by the drive device by moving the end part and the at least one machine (10) can be moved against the ceiling or a wall.
