Abstract (en)
  [origin: WO03028506A1] The invention relates to a shelf system for storing and archiving objects. The shelf system essentially consists of at least
  one shelf (1) having a rectangular cross-section with vertical longitudinal upright elements (2) arranged on the end points thereof. Horizontal cross
  beams (16,28) are disposed between two respective longitudinal upright elements (2) in order to fix bearing boards (5) respectively provided
  with a downward-oriented front face strip (15). The longitudinal upright elements (15) are provided with recesses (10) for receiving pairs of hooks
  (20,21,31), which are vertically and horizontally distanced and which are downward-oriented, on the cross elements (16,28). In order to guarantee
  high stability and load capacity of said bearing boards (5) with cross beams (16,28), the downward-oriented front face strip of the bearing board (5)
  can be clamped between the cross beam (16,28) and the supporting upright elements (2) of the shelf (1).
