Abstract (en)
[origin: WO03029040A1] A shift device for a gearbox (8) of a motor vehicle (2) comprising actuators for a first drive device in order to perform a selection movement of the shift device with a first electric motor (36) and for a second drive device in order to perform a selection movement of the shift device with a second electric motor (52), in addition to a control unit (50) which receives sensor signals, processes said sensor signals and transmits control signals to the electric motors (36, 52). The first and second drive device are arranged in a module (34) together with another actuator for a third drive device in order to perform an adjusting movement of a clutch device (6), provided with a third electric motor (62).
