Abstract (en)

[origin: WO03025116A2] The invention relates to a method for producing a lysate containing auxiliary proteins. According to said method, a strain, which is suitable for obtaining in vitro translation lysates is transformed using a vector containing one or more genes that code for one or more auxiliary proteins, the auxiliary proteins being expressed in said strain and the lysate containing auxiliary proteins being obtained from said strains. The invention also relates to a lysate containing auxiliary proteins that can be obtained according to the inventive method, to blends of said lysates and to the use of the lysates and blends in in vitro translation systems.
