Abstract (en)

[origin: WO03029564A3] The invention relates to a device for fixing a wear strip (7) to the blade of a snow plow. Said device comprises holding projections (3) which are arranged on the blade (1) and which engage in recesses (8) of the wear strip (7). In order to simplify the assembly and disassembly and to increase the reliability of the fixation, each holding projection (3) consists of a holding element (4) which is fixed to the blade and a locking element (5) which can be rotated in relation to the same. In the unlocked position, the locking element (5) and the holding element are (4) congruently superimposed in such a way that the wear strip (7) can be easily lifted and pushed. In the locked position, the locking element (5) is rotated in relation to the holding element (4) in such a way that the projections of the locking element (5) rest on the wear strip (7), from the outside, in such a way that the wear strip is positively fixed in all directions.
