Abstract (en)

[origin: DE10234265A1] The method for controlling a magnetic valve (100) involves taking into account at least one switching time of the load during the control process and determining the switching time and/or a correction value starting from a current value. The at least one switching time and/or correction value is/are determined starting from a static current value. An Independent claim is also included for the following: an arrangement for controlling an electromagnetic load, especially a magnetic valve.
