Abstract (en)
[origin: WO03021171A1] The invention relates to a refrigerating appliance comprising a heat-insulating housing and an inner chamber which is surrounded by said housing. The housing is provided with an inner container (1) and an outer wall which together define an intermediate chamber, and an evaporator (5) which is arranged in the intermediate chamber and is in thermal contact with a vertical wall (3) of the inner container. At least one plane oblique wall surface (6) is formed between the vertical wall (3) and a cover (2) of the inner container (1), the evaporator (5) extending on said surface.
